SHYAM SHARMA

Agentic AI Engineer | Multi-Agent Systems, LLM Tool Use, Evaluation & Guardrails

shyamsharma3.1415@gmail.com | +91 6003643630 | linkedin.com/in/shyam-sharma-5bb919343 | github.com/Shyamistic

SUMMARY

Engineer who builds AI agents that can be trusted in production: an incident-response agent accepted at IEEE COMPSAC 2026 (hallucinations cut from 8.0% to 1.2% by a safety validator), a sandbox-first autonomous SRE platform (AWS hackathon winner), an offline cyber-repair agent for the Indian Army Terrier Cyber Quest, and an 8-agent loan platform with a tamper-evident audit trail. Five months of production SaaS engineering alongside.

HIGHLIGHTS

IEEE COMPSAC 2026 accepted paper (agentic incident response) | **Hallucination rate 8.0% to 1.2%** on 150 production incidents | **AWS Global Vibe 2025 Winner** (AURA) | **Indian Army Terrier Cyber Quest 2026** (A.S.T.R.A.) | **90+ pull requests** in under 5 months

EXPERIENCE

Software Engineer, Wordwatch (UK enterprise compliance SaaS) | Remote | Jun 2026 - Oct 2026

- Shipped 90+ pull requests and 150+ commits across 4 repositories (React/TypeScript SPA, C#/.NET services) in a Jira-tracked agile team; owned features from API to UI.
- Built automatic risk-flag detection on transcription, IM and SMS ingest, and enterprise access control (RiskFlag / RiskFlagEdit) across the SPA and services.
- Contributed to the monitoring and observability stack (Prometheus, Grafana, Alertmanager, Elasticsearch, RabbitMQ) and fixed CI/CD failures.

Software Engineer (Volunteer), Vipassana Research Institute | Remote | Oct 2024 - Present

- Lead the VRI book inventory system (TypeScript, React, Supabase) used by 100+ meditation centres worldwide; architected its three-tier semantic search pipeline (stored QA, content, metadata) with confidence thresholds.
- Contributed to the team's OCR platform (six OCR engines, English and Hindi), the Pala platform (semantic-search RAG with embeddings, MCP-based storage, RBAC) and audio fingerprinting with CLAP embeddings and Milvus.

AURA: Autonomous SRE Platform | AWS Global Vibe AI Coding Hackathon 2025 Winner | Arcanum.AI Mentorship Program

- Designed sandbox-first remediation: every AI-generated fix is validated in an isolated environment before it reaches production (AWS Bedrock, Amazon Q Developer), built to cut incident recovery time.
- Selected for the Arcanum.AI mentorship program, with $10,000 of productionization support.

PROJECTS

Nexus Prime: Agentic AI for Incident Response (Azure) | IEEE COMPSAC 2026 (accepted) | Imagine Cup Regional Finalist
Live: white-river-06eae7700.2.azurestaticapps.net | Code: github.com/Shyamistic/Nexus-prime

- Built a multi-agent root-cause analysis system on Azure OpenAI: webhook ingestion (Datadog, Prometheus, PagerDuty), FastAPI and React, multi-tenant with JWT auth.
- Evaluated on 150 production incidents: 90% top-1 diagnostic accuracy; a safety validator cut hallucination rate from 8.0% to 1.2%; median diagnosis time fell from 48.3 min to 6.1 s.

A.S.T.R.A. (AI Kavach): Autonomous Cyber Reasoning System | Indian Army Terrier Cyber Quest 2026
Code: github.com/Shyamistic/A.S.T.R.A

- Built an offline agent for air-gapped networks that finds a vulnerability, generates a patch and verifies it by replaying the original proof-of-concept and regression tests in network-denied sandboxes; the LLM cannot approve its own patches.
- Every step is written to a hash-chained evidence ledger; demonstrated verified repair on two real CVEs (cJSON, zlib) and benchmarked patch generation on 104 real CVE fix pairs.

Finsa AI: Multi-Agent Loan Origination | SBI Hackathon 2026
Code: github.com/Shyamistic/Finsa-ai

- Orchestrated 8 specialised agents (speech, fraud, credit risk, persona, offers, compliance) over a Redis event bus with Bedrock entity extraction; offer limits and audit log are deterministic code with 17 property-based tests.

Nova Architect: AWS Infrastructure from Plain English (PyPI)
Code: github.com/Shyamistic/Nova-Architect-cli

- Published a Python CLI where Amazon Nova agents design an AWS architecture, ask for approval by voice, and drive the AWS Console to build it.

Vayu: AI Digital Climate Twin of India | ISRO BAH 2026 National Top 9
Code: github.com/Shyamistic/vayu

- Trained a 6.56M-parameter GraphSAGE + Transformer forecaster (PyTorch) with MC-dropout uncertainty; reported results beside simple baselines and beat them for rainfall in 3 of 4 regions.

SKILLS

Agentic AI: multi-agent orchestration, tool and function calling, structured outputs, guardrails and safety validators, human-in-the-loop review, evaluation and error analysis, MCP, RAG and embeddings, prompt engineering
Models and platforms: AWS Bedrock (Nova), Azure OpenAI, Gemini, Ollama, PyTorch, FAISS
Languages and backend: Python, TypeScript, JavaScript, C#, SQL; FastAPI, Flask, Node.js, PostgreSQL, MongoDB, Redis, RabbitMQ, event-driven design
Cloud and DevOps: AWS, Azure, GCP, Docker, Git, GitHub Actions CI/CD, Prometheus, Grafana

EDUCATION & ACHIEVEMENTS

MCA, IIT Patna and IIIT Ranchi joint program | Jul 2025 - Oct 2027 | CGPA 9.80/10 | **BCA, Gauhati University** | Oct 2021 - Nov 2024
Achievements: Pravega Agile ML Challenge, IISc: National Rank 2 | GitLab i-Hack, IIT Bombay: Top 10 of 5,000+ | Microsoft Imagine Cup Regional Finalist | IMC Prosperity 4: World Rank 332 of 18,800+ | Published nova-architect on PyPI
Certifications: Oracle Certified: Generative AI Professional, AI Foundations Associate, DevOps Professional; OCI 2025
