SHYAM SHARMA

Software Engineer | Python, TypeScript, React, FastAPI | Cloud & Applied AI

shyamsharma3.1415@gmail.com | +91 6003643630 | linkedin.com/in/shyam-sharma-5bb919343 | github.com/Shyamistic

SUMMARY

Software engineer with two years of experience shipping full-stack and backend features and building complete systems end to end: 90+ pull requests in under five months at an enterprise compliance SaaS, OCR, search and inventory systems for a global non-profit, products deployed on AWS, Azure and GCP, and an agentic AI system accepted at IEEE COMPSAC 2026. ISRO national finalist and AWS hackathon winner.

HIGHLIGHTS

90+ pull requests, 150+ commits, 4 repositories in under 5 months | **AWS Global Vibe 2025 Winner** (AURA) | **IEEE COMPSAC 2026** accepted paper | **ISRO BAH 2026 National Top 9** | **IMC Prosperity 4: World Rank 332** of 18,800+ | **MCA CGPA 9.80/10**

EXPERIENCE

Software Engineer, Wordwatch (UK enterprise compliance SaaS) | Remote | Jun 2026 - Oct 2026

- Shipped 90+ pull requests and 150+ commits across 4 repositories (React/TypeScript SPA, C#/.NET services, user and system management), owning features from API to UI in a Jira-tracked agile team.
- Delivered enterprise access control (RiskFlag / RiskFlagEdit) across the SPA, search mappers and system-management service, so users only see data their permissions allow.
- Built Share Saved Search end to end (API, copy logic, audit trail) and fixed a production 500 error in the share flow, with regression tests.
- Built automatic risk-flag detection on transcription, IM and SMS ingest, per-type export rules for Investigate exports, and a reworked CSV export format.
- Fixed front-end defects (browser zoom alignment, loading flicker, dialog keyboard accessibility, duplicate-entry validation) with unit and regression tests; contributed to monitoring (Prometheus, Grafana, RabbitMQ) and CI/CD fixes.

Software Engineer (Volunteer), Vipassana Research Institute | Remote | Oct 2024 - Present

- Lead the VRI book inventory system (TypeScript, React, Supabase) used by 100+ meditation centres worldwide; architected its three-tier semantic search pipeline (stored QA, content, metadata) with confidence thresholds.
- Contributed to the team's OCR and metadata-extraction platform (Flask, React, MongoDB; six OCR engines, English and Hindi), the Pala platform (semantic-search RAG with embeddings, MCP-based storage with deduplication, RBAC) and audio fingerprinting (Chromaprint, CLAP embeddings, Milvus).

AURA: Autonomous SRE Platform | AWS Global Vibe AI Coding Hackathon 2025 Winner | Arcanum.AI Mentorship Program

- Designed sandbox-first remediation: every AI-generated fix is validated in an isolated environment before production (AWS Bedrock, Amazon Q Developer); selected for the Arcanum.AI mentorship program with $10,000 of productionization support.

PROJECTS

Nexus Prime: Agentic AI for Incident Response (Azure) | IEEE COMPSAC 2026 (accepted) | Imagine Cup Regional Finalist
Live: white-river-06eae7700.2.azurestaticapps.net | Code: github.com/Shyamistic/Nexus-prime

- Reached 90% top-1 diagnostic accuracy on 150 production incidents; a safety validator cut hallucination rate from 8.0% to 1.2% and median diagnosis time fell from 48.3 min to 6.1 s.
- Built the multi-tenant FastAPI and React platform: JWT auth, webhook ingestion (Datadog, Prometheus, PagerDuty), Cosmos DB, Azure OpenAI, deployed through GitHub Actions.

A.S.T.R.A. (AI Kavach): Autonomous Cyber Reasoning System | Indian Army Terrier Cyber Quest 2026
Code: github.com/Shyamistic/A.S.T.R.A

- Built an offline system for air-gapped networks that finds a vulnerability, generates a patch and verifies it in network-denied sandboxes with a hash-chained evidence ledger; verified repair on two real CVEs (cJSON, zlib), benchmarked on 104 CVE fix pairs.

Vayu: AI Digital Climate Twin of India | ISRO BAH 2026 National Top 9
Code: github.com/Shyamistic/vayu

- Trained a 6.56M-parameter GraphSAGE + Transformer model (PyTorch) that beat a tuned baseline for rainfall in 3 of 4 regions; built the FastAPI service (32 routes) and React frontend with 400+ backend and 1,600+ frontend tests.

Finsa AI (SBI Hackathon 2026), ColdFlow (GCP Cloud Run), Nova Architect (PyPI)
Code: github.com/Shyamistic/Finsa-ai

- Finsa: 8 agents on a Redis event bus with a hash-chained audit log and 17 property-based tests. ColdFlow: Cloud Run service with a CI release gate (SBOM, digest-pinned image, Playwright). Nova Architect: published Python CLI that designs AWS architectures with Amazon Nova.

SKILLS

Languages: Python, TypeScript, JavaScript, C#, SQL, Java, C++ | **Frontend:** React, Next.js, Tailwind, Vitest, Playwright
Backend: FastAPI, Flask, Node.js, .NET, REST API design, PostgreSQL, MongoDB, Redis, RabbitMQ, Elasticsearch, event-driven design
AI: LLM tool use, multi-agent orchestration, RAG and embeddings, OCR pipelines, prompt engineering, AWS Bedrock, Azure OpenAI, Ollama, PyTorch
Cloud & DevOps: AWS, Azure, GCP, Docker, Git, CI/CD (GitHub Actions), logging, monitoring (Prometheus, Grafana)

EDUCATION & ACHIEVEMENTS

MCA, IIT Patna and IIIT Ranchi joint program | Jul 2025 - Oct 2027 | CGPA 9.80/10 | **BCA, Gauhati University** | Oct 2021 - Nov 2024
Achievements: Pravega Agile ML Challenge, IISc: National Rank 2 | GitLab i-Hack, IIT Bombay: Top 10 of 5,000+ | Microsoft Imagine Cup Regional Finalist | Published nova-architect on PyPI
Certifications: Oracle Certified: Generative AI Professional, AI Foundations Associate, DevOps Professional; OCI 2025
